Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections under 35 U.S.C. 112, 2nd paragraph

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-6 are rejected, because formula I has improper valance at the Carbon Atom-1 position. See claim 1.

3. Claim 5 provides for the use of plants, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 5 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections under 35 U.S.C. 102 (a,b,e)

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Basak et al (Acta Horticulturae, 2000, 514, pp. 41-50).

Basak teaches a method of applying calcium prohexadione to plum plants. Although Basak does not teach that this method would result in increasing and qualitatively modifying the content of the flavonoids and phenolic compounds in the plants, it is inherent that said application would result in increasing and modifying the content of flavonoids and phenolic compounds in the plants. This is inherent because the prior art as well as the instant invention simply recite the application of calcium prohexadione onto said plants. The reference is applicable because of the inventive entity on the reference differs from the inventive entity on record for the instant invention. English translation of priority document may be used to overcome this rejection.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyazawa et al (Brighton Crop Prot. Conf. -- Weeds, 1991, vol. 3, pp. 967-72).

Art Unit: 1616

Miyazawa teaches a method of applying calcium prohexadione to wheat plants. Although Miyazawa does not teach that this method would result in increasing and qualitatively modifying the content of the flavonoids and phenolic compounds in the plants, it is inherent that said application would result in increasing and modifying the content of flavonoids and phenolic compounds in the plants. This is inherent because the prior art as well as the instant invention simply recite the application of calcium prohexadione onto said plants.
